PROFILE

Final-year BSc (Hons) Computing Science student at Griffith College Dublin, graduating June 2027. I work mainly in Java, Python and SQL, and I have built software outside coursework: two years part-time on a core banking platform, where I debugged 200+ SQL-based regulatory reports and optimised 400+ queries against changing compliance rules, and projects I design, build and deploy end to end — from a multi-language site running in production to a self-hosted Proxmox cluster running my own services. I am working towards an AWS Solutions Architect certification, and I am looking for a graduate software engineering role where I can work across the stack and learn from experienced engineers.

Availability: Available part-time during term and full-time over the summer (Stamp 2). Graduating June 2027, then eligible for the Third Level Graduate Programme (Stamp 1G) — 12 months of full-time work with no employer permit required.

EDUCATION

Griffith College Dublin

BSc (Hons) in Computing Science | Dublin, Ireland | Full-time | Sep 2023 — Jun 2027 (expected)

SKILLS

Programming Languages: Java, JavaScript, Python, SQL, HTML, CSS

Backend & Web: Node.js, React, Next.js, REST APIs

Databases: MySQL, PostgreSQL

DevOps & Cloud: Docker, Kubernetes (K3s), AWS, CI/CD Pipelines, Git

Systems & Networking: Linux (Ubuntu, Debian, Arch), Bash, Proxmox VE, TCP/IP, DNS, DHCP, VLANs, LAN

PROFESSIONAL EXPERIENCE

Banking Software Implementation Specialist Intern at Y-Solutions

Moscow, Russia | Part-time | Nov 2019 — Oct 2021

- Validated and debugged 200+ SQL-based regulatory reports within a core banking system, ensuring data accuracy and compliance with financial regulations
- Engineered and optimized 400+ complex SQL queries, improving system throughput and ensuring 100% compliance with changing regulatory standards
- Supported implementation of the Diasoft core banking platform for 2 banks, assisting in system configuration, testing, and production deployment

Systems Integration Technician at PRO-Computer

Moscow, Russia | Part-time | Sep 2020 — May 2022

- Assembled and optimized 20+ custom high-performance systems, managing component compatibility, thermal dynamics, and hardware configuration
- Provisioned and hardened Windows OS environments, implementing security baselines, user access controls, and system updates
- Conducted rigorous hardware diagnostics and stress-testing to troubleshoot component conflicts, isolate faults, and guarantee 100% system stability before client delivery

PROJECTS

Villa Caterina | HTML, CSS, JavaScript, Python, GitHub Actions | Jun 2026 — present

Client site for a Lake Como rental, built database-free to keep running costs near zero: availability syncs from Booking.com via GitHub Actions, and the IT/FR/DE pages are generated from the English source. villacaterina.casa

github.com/villacaterina/VillaCaterina-web

Pro.me | React 19, Vite, Tailwind CSS, React Router v7, Node.js | Aug 2026 — present

Service-booking platform built solo, at concept stage: role-based dashboards and session auth on an Express backend with Helmet, rate limiting and input sanitisation. github.com/PeGoPaz/Pro-me

AI-GPU-Benchmark | Python, PyQt6, PyTorch, Transformers, PEFT | Jul 2026 — present

Measures the effect of GPU cooling changes: runs a fixed LoRA fine-tune while polling NVML every 250 ms, then plots thermal and power curves. github.com/PeGoPaz/AI-GPU-Benchmark

Self-Hosted Proxmox Cluster | Proxmox VE, Docker, WireGuard, Tailscale, Pi-hole | Dec 2025 — Jan 2026

Proxmox VE host running containerised self-hosted services behind a WireGuard mesh, with Pi-hole, ZFS and Grafana monitoring.

CERTIFICATES

“Junior Java Developer” — SkyPro | Mar 2022 — Feb 2023

AWS Certified Solutions Architect – Associate | In progress
